

UNLOCK VIRTUAL MACHINES

Optimize your IT infrastructure and reduce costs. By running multiple virtual machines on a single physical server, virtualization improves resource utilization and simplifies management.

EFFICIENCY

Server virtualization reduces the number of physical servers. Improves resource utilization, and improved energy efficiency.

DISASTER RECOVERY

Create backups or snapshots of virtual machines, simplifying data and application recovery in case of a system failure.

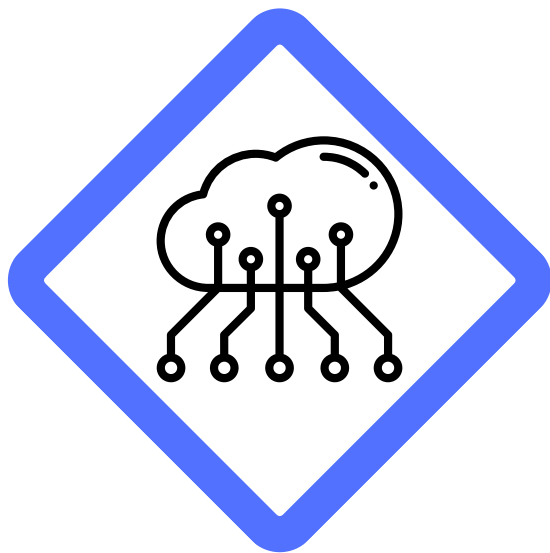

SCALABILITY

Allows IT teams to easily adjust virtual machines as needed, allowing for greater flexibility to meet changing business needs.

PERFORMANCE

Boost application performance by isolating each virtual machine and providing dedicated resources, reducing impact on other applications.

SAVINGS

Save on hardware, energy usage, and maintenance, by reducing the need for physical servers. Simplify IT management and operational costs.
